                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journal Journa
                                                                                                                                                                                                Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA computer based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACATTGTTTTCTGGGTGCTGGGAGCCCTGTTCCTGGCCATCGGCCTCTGGGCTG 251

Site 2: EcoRV (destroyed); RNA source anonymous pool of 3 fetal brains, female age 20 weeks, female age 24 weeks, and male age 26 weeks. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon 0.10ning). Average insert size 1.7 kb, insert size range 0.7-3.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 017. Note: this is a NIM MGC Library."

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                              Description

Novel isolated protein, a member of 4-transmembrane superfamily of receptor polypeptides, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases

Claim 1; Page 265-266; 271pp; English

The invention relates to human 4-transmembrane superfamily (TM4SF)
receptor polypeptides and polynucleotides. Sequences of the invention
are useful for preventing, treating, ameliorating or diagnosing a
pathological condition or a susceptibility to a pathological condition.
TM4SF polypeptides are useful for screening molecules which modify
their activity. TM4SF mucleic acids, protein, antibodies, agonists and
antagonists are useful in the diagnosis, treatment and prevention of
cancer, particularly breast and ovarian cancer, and other cancers of
the adrenal gland, bone, bone marrow, breast gastrointeestinal tract,
liver, lung, or urogenital; immune disorders such as Addison's disease,
allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
alaberes mellitus, Crobin's disease, multiple sclerosis, rheumatoid
archritis and ulcerative colitis; cardiovascular disorders such as
cerebral anoxia and epilepsy; and infectious diseases such as
cerebral anoxia and epilepsy; and infectious diseases such as
cerebral anoxia and epilepsy; and infectious diseases such as
cerebral anoxia and epilepsy; and present sequence is human TM4SF
receptor protein encoding CDNA.

or HTMP

```
The present sequence encodes a human transmembrane proteins (HTMP). Agonists and antagonists of the protein are used to treat a disease or condition associated with overexpression of the protein. Diseases and conditions which can be treated include cell proliferative, immunological, reproductive, smooth muscle and neurological disorders e.g. arterlosclerosis, myeloma, leukaemia, acquired immunodeficiency syndrome (AIDS), allergies, ovulatory defects, angina, hypertension, stroke, Alzheimer's disease, epilepsy and Tourette's disorder. The polymucleotides may be used to detect and quantify gene expression in biopsied tissues where protein expression may be correlated with disease e.g. to determine absence, presence or excess expression of HTMP or to monitor regulation of HTMP expression during therapeutic intervention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 184

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                            The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune collits; (c) cardiovascular disorders such as myocardial ischaemias; collits; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal corrections, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               173

This sequence encodes tetraspanin 23228. This protein is a cell surface protein having four transmembrane domains (TM1-TM4). TM1, TM3 and TM4 have a single polar maino acid located within them, which may interact with each other amino acid located within them, which may interact with each other and contribute to domain stability. The cytoplasmic N-cand C-terminal domains and the intracellular loop between TM2 and TM3 and TM4 contains conserved Cys residues and may function to bind extracellular growth factors, such as HB-EGF, TGF-alpha and complex control comphiregulin. The 23228 protein is useful for diagnosing and treating amphiregulin. The 23228 protein is useful for diagnosing and treating such as diabetes mellitus, arthitis, multiple aclerosis, concephalomyelitis, dermatitis, Crohn's disease and asthma; cell metastasis, and/or viral infections. 23228 polypeptide can control cellular signalling activity, bind to an extracellular growth factor, for example, amphiregulin, regulate cell proliferation, bind to a cell surface protein, to recruit intracellular kinases, to regulate cell motility, bind to another tetraspanin such as CDB1, to association control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control contro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to isolated nucleic acids and proteins encoding human soluble 4 transmembrane superfamily receptor protein (see encoding human soluble 4 transmembrane superfamily receptor protein (see AAC90012-C90023 and AAB49502-B49513). The present sequence is one such nucleic acid. The present sequence is useful for preventing, traating or pathological condition e.g. endocrine disorders e.g. Addison's disease, (cardio) vascular diseases, neural disorders e.g. Addison's disease, erebrovascular diseases, neural disorders e.g. Alzheimer's and Parkinson's disease, reproductive disorders e.g. Alzheimer's and proviatis, renal system disorders e.g. nephitis, (auto) immune system disorders e.g. graft vs. host disease, hyperproliferative disorders e.g. neoplasms of the pancreas, ocular disorders e.g. glaucoma and infections caused by bacteria, viruses and fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             109 GGCCTGGCTCCGGCTTCCGGCCGCGGCGGGTGGCCGCTCACCATGCCCGGCAAG 168

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠ
                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ12066) or their marure protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP65902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, wound, burns, incision, cleores, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc.

Collers in esequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO ce they way way.

                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                               This sequence represents the CDNA sequence encoding a novel rat Gamma-hydroxybutyrate receptor (GHBR) isolated from rat brain hypocampal CC gamma-hydroxybutyrate receptor (GHBR) isolated from rat brain hypocampal CC cell cDNA library. The invention relates to the isolation of this novel sequence, fragments of it and homologues of the sequence except for those homologues that having GenBank accession numbers AAC 17120 (human CC tetraspan NET-4), AAG15405, AA967250 or A1467210. GHBR is the receptor CC tetraspan NET-4), AA6174505, AA967250 or A1467210. GHBR is the receptor CC tor gamma-hydroxybutyrate in the rat brain and is involved in regulating dopaminergic, opioid and GABA (gamma-aminobutyric acid) ergic activities. CC The nucleic acid that encodes the protein is used: (1) as primers or probes for detection/amplification, particularly for screening gene (1) receptor of expression of recombinant polypeptides; and (3) to detect allelic capnormalities in the GHBR gene (for diagnosing diseases, or expression of recombinant polypeptides; and (3) to detect allelic capnormalities in the GHBR gene (for diagnosing diseases, or susceptibility, associated with abnormal expression of GHBR): The copportion (or cells and transgenic animals expression of GHBR): The copportion of the compounds; and (3) to raise antibodies (Ab) specific for GHBR. CC the Ab are used to detect/measure (1) in diagnostic immunosassays. The agents are used to prevent or treat diseases associated with abnormal copperation of animobutyric acid) ergic and/or dopaminergia activities, e.g. caplepsy, anxiety, sleep or behavioral diseases intidated with hormone copiection of hormones (growth hormone and notolactin) that are under dopamineratic control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ų.

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, former apping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, candioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, colon be used in gene therapy. The colon cancer antigen polynuclectides, and can be used in gene therapy. The colon cancer antigen polynuclectides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynuclectides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent disorders such as neural disorders, immune gastrointestinal disorders, wounds, renal disorders, immune diseases, and cardiovascular disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to isolated nucleic acids and proteins encoding human soluble 4 transmembrane superfamily receptor protein (see Accoolar-C90023 and AAB49502-B49511). The present sequence is one such nucleic acid. The present sequence is useful for preventing, treating ameliorating a medical condition and in diagnosing (susceptibility to) a pathological condition e.g. endocrine disorders e.g. Addison's disease, cerebrovascular diseases, neural disorders e.g. Alzheimer's and Parkingon's disease, reproductive disorders e.g. Alzheimer's and psoriasis, renal system disorders e.g. nephritis, (auto)immune system disorders e.g. graft vs. host disease, hyperproliferative disorders e.g. neoplasms of the pancreas, ocular disorders e.g. glaucoma and infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AGCACTACAAGGGTCCTGAAGTCAGTTGTTGCATCAAATACTTCATATTTGGCTTCAATG 160

The present invention relates to the isolation of novel CDNA sequences which encode human secreted proteins. The CDNA sequences have been derived from a variety of human tissues. The invention also provides method for producing proteins from these polynuclectide sequences. The proteins are useful for identifying compounds that modulate their activity and production. The sequences of the invention are useful for identifying compounds that modulate their activity and production. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis), infectious disorders (e.g. hepatitis), allergic conditions (e.g. asthma), neurodegenerative disorders (e.g. habeimer's disease), liver fibrosis, coagulation disorders (e.g. habeimer's disease), liver fibrosis, coagulation disorders (e.g. habeimers are also useful in gene therapy, ABK15610-ABK36212 represent

human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treading or ameliorating medical conditions.

Useful for preventing, treading or ameliorating medical conditions.

Useful for preventing, treading or ameliorating medical conditions.

Cor by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 97 genes, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours developing products for the and circincises, blood disorders, diseases of the immune system, autoimmune diseases, inflammation, allergies, Albachimer's and cognitive disorders, atherosclerosis, diabetes, cardiovascular disorders, kidney disorders, digestive/endocrine disorders, inflections and AIDS. The sequences shown in AAY76224 to AAY76424 represent fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TCGGGATGACATTGACCTCCAGAACCTCATTGACTTTGCTCAGGAATATTGGTCTTGCTG 585
